

Emanuel Trandafir

emanueltrandafir1993@gmail.com · [LinkedIn](#) · [GitHub](#) · [Blog](#) · [Baeldung](#)

- 8+ years of hands-on experience in software development.
- 20+ contributions to popular open-source Java projects.
- 70+ articles and tutorials published
- Java Lead at LSEG, driving improvements in observability, resilience, and test quality
- Contributed to BV-Group's migration from monolithic on-prem apps to cloud-based microservices.

Experience

Lead Java Developer | London Stock Exchange Group | Romania | Dec 2024 – Present

At LSEG, working for the London Clearing House (LCH) in the Forex Clear team, responsible for clearing Forex transactions, including up to \$639 billion in FX Options notional volume - cleared in January 2025.

- Conducted internal presentations on architecture in distributed systems and responsible AI usage. This shaped the way we structure our system and led to the external talk, "Consistency and Coordination Patterns in Event-Driven Architecture," soon to be presented at [iPrime Sofia](#) and [the Swiss JUG](#).
- Advocated for and helped establish better observability practices to shorten the feedback loop—especially as the team adopted AI agents for faster code generation and integration. (*OpenTelemetry, Datadog*)
- Implemented data housekeeping functionality based on Oracle DB partitioning by business date. (*Oracle DB, Liquibase*)
- Led improvements in unit and integration testing by introducing best practices and refactoring BDD tests into executable specifications. Shortened build times by 5 minutes. (*BDD, Cucumber, Awaitility, Gitlab*)

Software Engineer | BV Group | Gibraltar | May 2021 – Dec 2024

At BV-Group, a global sports betting and online casino company. Part of the Marketing Tools team, building solutions for promotions, campaigns, communications, and customer bonuses across brands and countries.

- Contributed to design discussions and architectural decisions during BV-Group's migration from on-premises infrastructure to cloud-based microservices. Managed complexities of hybrid deployments and ensured performance during high-traffic events (Olympic Games, FIFA World Cup). (*Google Cloud, Kubernetes, GitLab, Maven, Grafana*)
- Developed event-driven microservices to aggregate real-time data from various sources and store it in BigQuery for reporting. (*Java, Kotlin, Kafka, Spring Events, BigQuery, Firestore*)
- Rebuilt a legacy web application for promotional data management, decomposing UI operations into cohesive microservices. Engaged directly with operators to consolidate the domain model. (*BDD, DDD, REST APIs, Spring Security, Oracle, MongoDB, Vaadin*)
- Crafted comprehensive end-to-end tests prioritizing system behavior over implementation details, substantially improving deployment confidence. (*JUnit 5, AssertJ, WireMock, Testcontainers, Docker, CI/CD*)

Software Developer | PSS – Prosoft Solutions | Romania | Oct 2017 – May 2021

- Engineered modular Java applications for a large German retailer, integrating retail weighing scales with hardware components for payment processing, receipt printing, barcode scanning, and reporting. (*Java, OSGi, REST APIs, H2, JavaScript, Angular*)
- Improved project testability and created scripts enabling remote QA work during the COVID-19 pandemic. (*Python*)
- Mentored new team members and junior developers through technical training programs. Configured a generic banking platform for mortgage lending and customized its UI. (*JavaScript, Angular, Formly.js*)

Open-Source Contributor, Author & Speaker

- Authored 70+ tutorials and courses on [Baeldung.com](https://baeldung.com), covering software architecture, unit testing, asynchronous programming, Spring, Kafka, and more.
- Contributed code to widely used open-source Java projects, with changes included in official releases of [Micrometer](#), [AssertJ](#), [Spring LDAP](#), [Springwolf](#), jMolecules, and FasterXML Jackson.
- Improved documentation, opened issues, proposed features, and participated in design discussions across *Spring Framework*, *Spring Modulith*, *Testcontainers*, *JUnit 5*, *Mockito*, *NullAway*, and *Google APIs*.
- Technical reviewer for both editions of the [Angry Tests](#) books by Yegor Bugayenko. First edition published; second edition in progress.
- Created a talk on “*Consistency and Coordination Patterns in Event-Driven Architecture*,” and presented it multiple times online and in person. This includes patterns like orchestration, choreography, saga, transactional inbox, and outbox - soon to be presented in person at the [jPrime Sofia](#) conference and online for [the Swiss JUG](#).
